

In diesem Decoder ist folgendes
ZIMO Sound-Projekt geladen:

Regelspurlokomotive
Gas Turbine „Veranda“– Version
 30.23

These 'Veranda' Gas Turbine Locos were the 2nd generation of Gas Turbine locos built by General Electric (GE) for the Union Pacific Railroad.

Units 61 to 75 were delivered to Union Pacific beginning in 1954. These were visibly different from the previous generation because of the addition of external walkways on the sides of the locomotives, earning them the nickname 'verandas' and making them hybrids of carbody and hood locomotives. The turbine and electrical equipment were essentially the same, though the side louver air intakes were replaced by the large roof mounted intake first tested on UP 53.

Der Einbau der ZIMO Sound Decoder MX64x (H0) und MX69x (Großbahn) mit diesem Projekt kann in alle passenden Modelle erfolgen.

ACHTUNG: Nach dem Einbau des Decoders ist eine Messfahrt notwendig -> CV # 302 = 75

In diesem Projekt sind folgende Funktionszuordnungen getroffen:

F-Taste	Einrichtung	am Funktionsausgang	Sound-Funktion
F0	Licht	FA0 (gelb/weis)	
F1		FA1	
F2			
F3			Horn1
F4	Rangiergang /ABV		
F5			
F6			
F7			Glocke
F8			SOUND ON/OFF
F9			Luft
F10			zisch
F11			
F12			
F13			
F14			
F15			
F16			
F17			
F18			
F19
